AKSHAT BHARDWAJ

Hyderabad, Telangana, India | akshatbhardwaj0801@gmail.com
linkedin.com/in/akshat-bhardwaj-84bb52271 | github.com/AKSHAT-BHARDWAJ01

PROFESSIONAL SUMMARY

Platform Engineer experienced in mobile backend migration, release engineering (CI/CD, EAS, OTA updates), and cross-platform QA on a React Native/Expo application, with additional research experience in applied AI/ML (RAG, LLM fine-tuning, generative AI). Skilled in Python, FastAPI, PostgreSQL, and full-stack development, with a published IEEE research paper in healthcare AI.

EDUCATION

Vidya Jyothi Institute Of Technology — Hyderabad, Telangana
Bachelor of Technology in Computer Science; GPA: 8.25 — *Oct. 2022 – Present*

EXPERIENCE

JulleyOnline.in — Hyderabad, Telangana
Platform Engineer — *Aug 2026 – Present*

- **Backend Migration:** Contributed to migrating a production React Native/Expo mobile application from Firebase to PostgreSQL-backed REST APIs across 30+ files, maintaining production uptime throughout the transition.
- **Version Control Recovery:** Reconciled a 126+ commit divergence across 9 core app screens to restore a clean branch baseline with zero data or feature loss.
- **QA, Hotfix & Git Workflow:** Diagnosed and fixed a touch-interception bug in a shared dropdown component and a UX gating issue in task creation; shipped the fix through an isolated git worktree, verifying diff scope (+39/-2 across 2 files) and running functional and regression testing – lint, type-checks, and real-device validation across iOS/Android – before merge.
- **Release Engineering:** Audited the mobile CI/CD setup (GitHub Actions, EAS profiles, build channels, runtime versioning) and implemented a Firebase Remote Config-based force-update mechanism with version comparison and fail-open error handling.
- **Mobile Feature Development:** Translated Figma specifications into React Native components (task management, workspace hierarchies, Insights drill-downs, biometric authentication, multi-format document preview); produced a severity-ranked QA bug report and established real-device verification as the release standard.

Swecha Telangana — IIIT Hyderabad, India (Hybrid)
AI Research Intern — *May 2025 – June 2025*

- **AI Assistant Development:** Built an open-source AI assistant using Hugging Face, handling 50+ complex query types through optimized prompt engineering.
- **RAG System:** Designed a Retrieval-Augmented Generation (RAG) system with custom knowledge bases, reducing information retrieval time by 40%.
- **LLM Inference:** Deployed local LLM inference using Ollama and PocketPal, enabling offline execution of 7+ language models.
- **Model Fine-tuning:** Fine-tuned transformer models for specific NLP tasks, improving accuracy by 15%.

Agnirva.com Space Community — Hyderabad, India (Remote)
AI Research Intern — *July 2025*

- **LLM-Based AI Assistants:** Built LLM-based AI assistants using Hugging Face and Generative AI techniques for design, audio, and video generation.
- **AI Use-Case Analysis:** Analyzed real-world AI applications in climate research and satellite data processing, developing insights into AI adoption in industry and research.
- **Generative AI & Prompt Engineering:** Created AI-assisted creative outputs and gained practical experience with generative AI tools and prompt engineering.

PROJECTS

Healthcare.ai – AI Health Prediction Platform — **GitHub**
Tech Stack: *React, FastAPI, Supabase, PyTorch, Hugging Face, JWT* — *2025*

- **AI Health Assistant:** Analyzes symptoms and medical text to provide preliminary health insights using NLP models.
- **Smart Medical Report Management:** Enables users to securely upload, store, analyze, and summarize medical reports; converts clinical data into plain-language summaries and supports sharing with doctors via QR codes.
- **Unified Patient Dashboard & Timeline:** Maintains a complete digital health profile (reports, diagnoses, medications, AI observations), helping patients and doctors track health progress over time.
- **Caretaker & Emergency Management:** Integrated caregiver dashboards, emergency contacts, health alerts, and secure report sharing with healthcare providers.
- **Research Publication:** Core system published at IEEE ICoECIT 2026 (see Achievements and Publications).

TaskFlow – Full-Stack Task Management Platform **GitHub**

Tech Stack: *React, FastAPI, Supabase, PostgreSQL, JWT, Docker, Vercel* *2026*

- **User Authentication & Security:** Implemented JWT-based authentication with bcrypt password hashing, secure session management, and role-based access control.
- **Task Management System:** Designed a complete CRUD application enabling users to create, update, track, and delete tasks with real-time status updates and priority-based filtering.
- **Analytics Dashboard:** Engineered an interactive analytics module with real-time data visualization, including completion-rate charts and status distribution graphs.
- **Smart Search & Filters:** Created an advanced filtering system for searching tasks by title, description, category, status, and priority.
- **Full-Stack Deployment & Testing:** Deployed on Vercel with serverless functions and a Supabase PostgreSQL database; maintained automated test coverage via pytest and Vitest, with CI/CD through GitHub Actions.

Burry AI – Personal Finance Advisor **GitHub**

Tech Stack: *React, FastAPI, PostgreSQL, Scikit-Learn, Pandas, NumPy* *2026*

- **AI Advisor:** Developed a personalized AI guidance system that analyzes user spending trends and financial goals to deliver tailored recommendations.
- **Data Analytics Dashboard:** Built an interactive finance platform tracking income and expenses with real-time data visualization.
- **Cost Optimization Engine:** Designed a spending-analysis feature that identifies avoidable expenses and recommends cost-saving actions.
- **Trend Analysis:** Implemented charts showing expense patterns, category breakdowns, and income-vs-spending correlations.

Webopedia – Accessible Wikipedia Clone **GitHub**

Tech Stack: *React, Wikipedia API, Web Speech API, CSS* *2023*

- **Search and Content Rendering:** Built a dynamic search and content rendering system using the Wikipedia API for real-time articles and images.
- **Assistive Navigation:** Added a floating action button for quick access to assistive features, enabling hands-free and visually assisted navigation.
- **Text-to-Speech:** Integrated Text-to-Speech (Web Speech API) for audio-based content consumption for visually impaired and elderly users.
- **Team Project:** Built with Team Blaze at the Hack-O-Mania Hackathon (2023), focusing on inclusive, accessibility-first web design.

ACHIEVEMENTS AND PUBLICATIONS

- **1st Place – Hack-O-Mania Hackathon:** Organized by GDSC & DSS, VJIT (November 2023); built a working solution (Webopedia) within a 24-hour hackathon.
- **Paper Presenter – ICCIDSDT 2026:** Presented “Healthcare.AI: An Integrated Artificial Intelligence Platform for Proactive Patient Care” at MANUU, Hyderabad (January 2026).
- **Certification – Introduction to Generative AI Studio:** Completed via Simplilearn (February 2026).
- **Research Publication – IEEE ICoECIT 2026:** A. Bhardwaj, M. M. Ali, M. S. U. Tayyab, M. W. Uddin Taher, and P. K. Yadala, “Healthcare AI: An Integrated AI Platform for Proactive Patient Care and Medical Data Management,” 2026 IEEE International Conference on Emerging Computing and Intelligent Technologies (ICoECIT), Hyderabad, India, 2026, pp. 1–5. DOI: 10.1109/ICoECIT68303.2026.11497893.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, SQL, HTML, CSS
- **Mobile & Frontend:** React Native, Expo, Expo Router, React.js
- **Backend, Databases & DevOps:** FastAPI, PostgreSQL, Firebase, REST APIs, JWT, Docker, Vercel, GitHub Actions (CI/CD), EAS Build/Update
- **AI/ML & Data:** Hugging Face, PyTorch, Scikit-Learn, Pandas, NumPy, RAG, LLM Fine-Tuning, Prompt Engineering, NLP, Generative AI, Ollama
- **Testing & Tools:** Git, pytest, Vitest, Functional & Regression Testing, Figma (spec translation)
